support for virtualization. IBM also offers a virtualization application infrastructure, Websphere, which supports programming models and open standards for virtualization.

The management layer of the IBM cloud framework includes IBM Tivoli middleware.[Management tools provide capabilities to regulate images with automated provisioning and de- provisioning, monitor operations and meter usage while tracking costs and allocating billing. The last layer of the framework provides integrated workload tools.Workloads (in the context of cloud computing) are services or instances of code that can be executed to meet specific business needs.IBM also offers tools for cloud based collaboration, development and testing, applicationdevelopment, analytics, business-to-business integration, and security.
